

eOrder 2.0.113 Update
Release Notes
February 27, 2014

Overview
=====

This wizard will update eOrder to version 2.0.113.

This is a cumulative update. It includes all updates made available since the release of version 2.0.84. It is not necessary to install earlier patches or service packs.

Please note that your configuration files will not be removed or replaced with this update. These files are located at C:\Program Files\PLP\OpCenter\conf or C:\Program Files (x-86)\PLP\OpCenter\conf and include:

License.properties
SendMail.xml
upload.properties
WebAccess.xml
XSL/order.xsl
XSL/WebAccess2PFS.xsl

Any changes you would like to make to these files will need to be applied manually after updating.

Important
=====

A change was made in the eOrder installer in version 2.0.84 to include and support both 32-bit and 64-bit installations.

Any customers upgrading from eOrder 2.0.81 or earlier builds must backup (the above "conf" folder and its contents) and uninstall their existing eOrder installation and then install the eOrder full version installation file of the latest build.

Note, this will not delete existing configuration or license files. On any 64-bit server, the "conf" files will need to be moved to the new installation path (C:\Program Files\PLP\OpCenter\conf instead of the original C:\Program Files (x-86)\PLP\OpCenter\conf folder).

****Please note that you must manually update BOTH SendMail.xml AND order.xsl for ALL existing installations running a version prior to 2.0.98. With version 2.0.98 and newer, all NEW installs will include the updated files.****

Changes
=====

Issues addressed with Version 2.0.113:

E0-230: Don't overwrite server.xml during update

E0-300: Custom fields for the contact/billing/shipping tabs do not populate correctly on the confirmation email

Issues addressed with version 2.0.100:

E0-195: Allow labels to be configured for standard fields

E0-231: Order date/time in order.xml should be generated by server

E0-263: Enable user to submit orders when both the Plans/Specs and Other tabs are not visible

Issues addressed with version 2.0.99:

E0-125: Block uploading of executable content

E0-245: Ability to rename ePickup tab from Pickup Info

E0-259: Remove Job Type option --Select; use built-in prompt instead

Issues addressed with version 2.0.98:

Resolved a few issues with the embedded order form in the email notification.

Issues addressed with version 2.0.97:

E0-151: Embed order form as HTML within the email body not as an attachment

E0-236: Support a different email configuration for order and pickup requests

E0-237: Send email to customer separately from email to print operators

E0-241: Change the color of the "Next" button to green

E0-248: Hide Job type column if there is only one option

E0-249: Make the display of the Color column configurable

E0-250: Control the Display of the Configure Selected Files

E0-251: Add More Fields to e-mail Template. (superceded by E0-151)

E0-253: File path not working (only for IE)

Issues addressed with version 2.0.96:

E0-258: Add <to> Element to Pickup Element

Issues addressed with version 2.0.95:

E0-236: Support a different email configuration for orders and pickup requests

E0-237: Send email to customer separately from email to print operators

E0-241: Change the color of the "Next" button to Green

E0-248: Hide Job type column if there is only one option

E0-249: Make the display of the Color column configurable

E0-250: Control the Display of the Configure Selected Files

E0-251: Add More Fields to e-mail Template

E0-253: File path not working (only for IE)

The included PDF "eOrder Installation and Configuration.pdf" has been updated to reflect new changes.

Issues addressed with version 2.0.91:

Resolved an issue where files were written to the wrong folder due to client browser caching

Issues addressed with version 2.0.90:

E0-243: OpCenter Server service adds random characters in service executable path

Issues addressed with version 2.0.88:

E0-234: Pasting Information into Address Line 2 on the contact/billing/shipping tabs yields no information on confirmation.html

Issues addressed with version 2.0.87:

E0-217: Due Time enhancement. Includes support for up/down arrow keys, which automatically adjusts AM/PM

E0-198: Upload tab is difficult to use with multiple files (job type, color mode). Improved usability on "Add Files" page when setting Job Type and Color options
Includes CTRL+A keyboard shortcut to select all files

E0-233: Add configuration option for adding vertical space between custom fields
<custom-field type="spacer" height="20" />

Issues addressed with version 2.0.85:

E0-229: Allow free form text to be placed on any tab that supports custom fields
-<message form="plans">Add text here</message>
-<message form="specs"></message>
-<message form="left"></message>
-<message form="right"></message>

Other Minor issues addressed:
Addressed a browser cache issue.

Issues addressed with version 2.0.84:

E0-226: Ability to configure the label for the "Plans & Specs" and "Order Info" tab/page.

```
-<header form="plans">Plans</header>  
-<header form="specs">Specs</header>  
-<header form="left">Other</header>  
-<header form="right">Other</header>
```

E0-178: Set default time requested to 5pm (end of day) instead of 12pm (mid-day)

Other Minor issues addressed:

- Installer supports 32-bit and 64-bit platforms
- Latest Java Runtime Environment (JRE)
- Multiple-form support for eOrder & ePickup
- Improved error handling
